Summary

Computer engineer who automates business processes with AI. I have used it every day since 2023, both at work and in my personal life. After my time at AiKit Research, I am looking for a company that is clear that AI makes the difference and wants to build it deeply into its whole operation. If a test is needed, I will build whatever automation you want.

Experience

Jun 2025 – Nov 2026
Madrid

AiKit Research

AI Process Automation Specialist

AiKit Research is one of the pioneering companies in AI for businesses: it connects AI to their ERPs and systems to automate real processes, working with the leading models, both American and Chinese, such as ChatGPT, Claude, Gemini, DeepSeek or GLM.

Some of the things I have done:

- I automated purchase invoices, employee time tracking and holiday management, freeing up dozens of hours of administrative work every month.
- I also took on the role of Head of Talent: defining profiles, selection and closing.

Apr 2021 – Dec 2025
Tres Cantos, Madrid

Work In Space
